

Session Initiation Protocol (SIP) Trunks

Crystal-clear voice and video calls start with a reliable fiber backbone

Desk phones are still an essential part of getting work done. Inconsistent, inefficient PSTN lines and ISTN trunks? Not so much. Business-critical voice and video communications are too important to settle for a subpar connection.

Why Segra SIP Trunks

Sending the right message is too important to your success to settle for less.

Whether you're moving from standalone voice tech to a centralized IP network or moving toward Unified Communications as a Service, fiber-powered voice and video communications can help get you there. Segra SIP Trunks enhance your ability to remain flexible and adaptable to changing business needs, with more cost control. Hardware updates aren't necessary to get the most out of internet call transport — you can still use your cable, DSL or internet access and your current PBX and IP BX phone systems. Best of all? Ongoing monitoring and management is handled by Segra experts 24/7/365 so you can stay focused on taking care of business.

Features and Benefits

- **Automatic failover** between trunks keeps your service up and running no matter what.
- As your business needs change, your service can, too, with **"grow-as-you-go" scalability**.
- **Connect without worry** — Segra SIP Trunks are compatible with most wired and wireless connectivity systems.

Specifications

-  Unlimited local calling
-  200 free minutes of outbound long distance and incoming toll-free calling per line
-  Local number porting supported
-  24/7/365 network monitoring and maintenance
