

Wireless Backup

A multi-carrier solution that keeps your business up and connected... always

Disruptions to data or internet connections don't come with a warning. Waiting until disaster strikes to discover you don't have a backup plan could be a costly mistake.

Why Segra Wireless Backup

Segra Wireless Backup delivers peace of mind that your employees can connect to the applications they need in the event of an outage. If your connection goes down, the automatic failover system kicks in to keep you up and running until your primary access is restored. In the event of a primary link outage, your same network rules, priorities, IPs, and policies will be seamlessly extended over LTE.

We partner with the top national carriers and provide dual SIM capabilities for a separate primary and secondary connection, giving Wireless Access optimal LTE signal strength.

Specifications

Available throughout the Segra footprint

Segra Managed Router and Segra WAN (DIA or MPLS) is required

Select your preferred carrier(s) prior to installation

Features and Benefits

- **Multi-carrier options** allows you to choose the best providers for your primary and secondary signals.
- **Flat monthly rate with no usage fees** means no surprises on your bill, regardless of outage duration.
- **Automatic failover switching** to Segra WAN maintains your connection without disruption or downtime.
- **Private wireless connection** to the Segra network keeps your systems and data secure until access is restored.
- **24/7 monitoring and management** ensures your wireless backup is always ready to respond.
