

Distributed Denial of Service (DDoS) Protection

Waiting until an attack takes your system to the ground is the wrong time to start thinking about your defenses.

Think a DDoS attack is nothing more than an “annoying, harmless distraction”? With so much riding on the line, is it worth taking the risk and hoping you never have to find out the hard way?

Why Segra DDoS Protection

Lost revenue. Reputational injury. Broken customer confidence. DDoS attacks are one of the most potentially devastating cybersecurity threats, and trying to recover from the aftermath can cost thousands of dollars per-minute.

When it comes to protecting your ability to take care of business, prevention is the best way to ensure your network never falls victim to harmful botnet traffic. Segra DDoS Protection is the always-at-the-ready first line of defense that detects and deflects potential threats before they have a chance to knock on your door. How? By scanning incoming traffic in real-time against the latest threat definitions and behaviors to spot bad actors trying to hide in plain sight.

Features and Benefits

- **“Grow-as-you-go” scalability** adapts to your network demands now and into the future.
- **Comprehensive protection analytics** are continuously updated with the latest DDoS threat definitions and behaviors.
- **Suspicious traffic is automatically identified** and intercepted while safe activity is allowed to pass without interference.
- **24/7 traffic scanning** keeps a watchful eye on the comings and goings to your online presence all day, all night, all year long.

Specifications

Mitigates volumetric, reflective and resource-exhaustion attack types

Segra Dedicated Internet Access (DIA) required

24/7/365 protection

Available throughout the entire Segra fiber footprint
