Ethernet **WAN**

High speed and high security without a high price tag.

Peak performance and resilience? Check. Bandwidth that moves at the speed of business and adapts to your needs? Check. A cost-effective way to build your private network? Check.

Why Segra Ethernet WAN

Building a rock-solid IT stack starts with the right network foundation. When it comes to reliably and securely connecting locations across your footprint, few things make a bigger impact.

Enter Segra Ethernet-WAN. Ideal for enterprise-grade operations where speed, flexibility and security are essential, everything necessary to connect your entire WAN is at your fingertips, including point-to-point and multi-point topologies featuring available switched or routed configurations.

Features and Benefits

- **Carrier-grade Service Level Agreements (SLAS)** guarantee you get the performance you deserve.
- **Scalable bandwidth** grows with your business, without costly hardware upgrades.
- **Point-to-point or multi-point topologies** give the flexibility to adjust to your business needs.
- **Multiple Quality of Service (QoS)** options help you avoid logjams and keep critical traffic flowing smoothly.
- **Switched or routed** options give you the flexibility to let Segra manage the WAN or deploy your own routing infrastructure.

Specifications

Type 1 (on-net) and Type 2 (off-net) access options

MEF Certified

Switched and fully meshed routed configurations

Available bandwidth from 20 Mbps up to 10 Gbps

Ports: 1 Gbps, 10 Gbps

Speeds: 20 Mbps to 10 Gbps

Available across the entire Segra footprint
