

# Holistic network defenses **without** the heavy lifting

Your security is only as good as your weakest link.

It's time to step up your defenses that let safe traffic pass by while stopping threats in their tracks.

## Why Segra Hosted Firewall

Change can be a good thing. It can also be a problem for traditional security measures that require lots of hands-on work to remain ready for action against rapidly evolving cyber threats.

Configured, activated, hosted and maintained by Segra experts, Hosted Firewall deploys from the cloud for maximum performance and reliability that won't push your IT resources to the brink. From network address translation to DMZ interfaces, the security policies that make sense for your needs are blanketed across your entire network, ensuring bad actors are kept at the gates while safe traffic is allowed to move freely.

## Features and Benefits

- Three different tiers of protection – **Shield, Guard and Fortify** – apply the level of security policies you need from end to end.
- **Unified Threat Management** architecture delivers maximum protection and peace of mind.
- **“Grow-as-you-go” scalability** works with your current needs and adapts to meet the demands and changes of the future.
- **Rapid deployment and threat update times** are made possible by cloud deployment and continual Segra management.

## Specifications

Speeds from 1 Mbps up to 10 Gbps

Managed by experts 24/7/365

Segra Dedicated Internet Access (DIA) or VPN required

Available throughout the entire Segra fiber footprint
