Managed **Switch**

Holistic switch management made easy

In-house switch management isn't always practical or economical. What could you do if keeping your employees connected didn't require so much stressing and struggling?

Why Segra Managed Switch

Quick and easy. How many times have those words been used to describe the work involved with switch management? While many tech professionals have the skill and know-how needed, trying to handle the process in-house often requires more time and resources than a DIY-effort can justify.

That's where Segra Managed Switch comes in. From installation and configuration to ongoing monitoring and routine maintenance, the entire process is handled by experts from end-to-end. Fully managed from the start, the stress-work and guesswork of hands-on management is replaced by the peace of mind that your systems will run the way they should in the here and now and every day after.

Specifications

Speeds from 1 Gbps to 10 Gbps

Available across the entire Segra fiber network

Choice of 8, 24 or 48 ports

Ethernet access

Segra Managed Router or WAN (DIA or VPRN) required

Features and Benefits

o **Campus switch management** keeps your employees and equipment connected from wherever they are no matter where they are.

o **Branch switching provides greater security**, visibility and quality of service options across the satellite locations on your network.

o **Hot Standby Router Protocol (HSRP)** maintains your connection in the event of disruption with advanced failover protection and network resiliency measures.

o **Monitored and managed by Segra's** Network Operations Center 24/7/365.

o **Easily deploy and activate new switches** to maximize performance and throughput as your needs and priorities change.
