# Wireless Access

Wireless Access is a flexible, reliable solution for customers that need an affordable primary network connection at a remote location that can run their critical business services like voice, data and internet. This solutions deliver a seamless, highly available wireless solution over our secure, private IP network or our dedicated Internet service. Not only is it powered by the largest 4G/LTE providers in the nation, it's packaged with deployment services and around-the-clock customer support from Segra's Network Operations Center.

HOW WIRELESS ACCESS WORKS

PRIMARY   FAILOVER   FIBER

SUPPORTS VOICE, DATA AND INTERNET
This means that you can extend the same business critical functionality to remote locations that are not located on the Segra MPLS, with same on-network security protocols.

SEAMLESS FAIL-OVER TO BACKUP CARRIER
If your designated primary LTE provider signal drops for whatever reason, with the dual SIM model your connection will immediately fail-over to your designated secondary carrier.

MULTI-FUNCTIONAL IMPLEMENTATION
This device can be deployed as a backup/fail-over device or as a primary connection to your MPLS.

MULTI-CARRIER DUAL SIM AVAILABILITY
With the dual SIM model, you can designate the local wireless provider for both primary and backup LTE connections to your device.

FLEXIBLE DESIGN
Supports MPLS, private line or internet connections no matter where you're located.
